

CALCULATE YOUR BANDWIDTH

When it comes to bandwidth, every business has different requirements. If you think of your bandwidth needs as water moving through a hose, you can image how much more water you'd need to fill up 50 swimming pools than five bathtubs. No matter how your business uses the internet, knowing how much bandwidth it's using—or needs—is key to ensuring it has enough to operate efficiently. Follow the hose below to learn more about the factors that determine how much bandwidth your business needs.

Bandwidth Factors

- 👤 One user needs less bandwidth than multiple users
- 🖥️ One device needs less bandwidth than multiple devices
- 📍 One location needs less bandwidth than multiple locations
- ✉️ Sending emails and browsing the internet uses less bandwidth
- 🌐 Video conferencing and cloud based computing requires more bandwidth

Contact a Cable ONE Business Adviser today to determine how much bandwidth is right for your business needs.
